

## **Amendments to the Claims**

### **1. (previously presented) Apparatus comprising:**

**an automated banking machine, including:**

**an output device, wherein the output device outputs information, whereby  
a user is enabled to perceive outputs from the output device;**

**an input device, wherein the input device is operative to receive inputs,  
whereby a user is enabled to provide inputs to the machine;**

**a transaction function device, wherein the transaction function device is  
selectively operative to carry out a transaction function;**

**a computer, wherein the computer is in operative connection with the  
output device, the input device and the transaction function device;**

**software executable in the computer, wherein the software includes a  
browser, wherein the browser is operative to process HTML documents  
including instructions therein, and wherein the transaction function device  
is operative to carry out the transaction function responsive to the browser**

processing at least one document including at least one instruction adapted to cause the computer to cause operation of the transaction function device.

2. (previously presented) The apparatus according to claim 1 wherein the transaction function device includes a sheet dispenser.

3. (previously presented) The apparatus according to claim 1 wherein the transaction function device includes a card reader.

4. (previously presented) The apparatus according to claim 1 wherein the transaction function device includes a printer.

5. (previously presented) The apparatus according to claim 1 wherein the transaction function device includes a depository.

6. (previously presented) The apparatus according to claim 1 wherein the transaction function device includes a keyboard.

7. (previously presented) The apparatus according to claim 1 wherein the software is operative responsive to an instruction to access at least one HTTP record address, wherein the at least one

HTTP record address corresponds to at least one HTTP record including instructions adapted to cause the computer to cause operation of the transaction function device.

8. (currently amended) An Automated Teller Machine (ATM) comprising:

a computer;

a browser operating in the computer;

a transaction function device in operative connection with the computer, wherein the computer transaction function device is operative to cause the transaction function device ATM to carry out a transaction function responsive to at least one HTML format document that is received by the browser.

9. (previously presented) A method comprising the steps of:

- a) operating a browser in at least one computer in connection with an automated banking machine;
- b) receiving at least one HTML format document with the browser, wherein the at least one HTML format document includes at least one transaction instruction;

- c) carrying out at least one transaction function with a transaction function device in the automated banking machine responsive to the at least one HTML format document.

10. (previously presented) The method according to claim 9 wherein the automated banking machine includes an output device in operative connection with the computer, and further comprising the step of:

- d) producing an output through the output device responsive to the at least one HTML format document.

11. (previously presented) A method comprising the steps of:

- a) operating a browser in at least one computer in operative connection with an automated banking machine;
- b) receiving at least one document with the browser, wherein the document includes at least one transaction instruction embedded therein;

- c) carrying out at least one transaction function with a transaction function device in the automated banking machine responsive to the at least one document including the at least one transaction instruction.

12. (previously presented) An Automated Teller Machine (ATM) that operates to conduct at least one financial transaction responsive to at least one mark-up language document.

13. (previously presented) An automated banking machine comprising:

a computer in operative connection with the banking machine;

at least one transaction function device in the banking machine adapted to carry out at least a portion of a banking transaction;

wherein the computer is adapted to cause at least one banking transaction to be carried out through operation of the at least one transaction function device responsive to at least one mark up language document.

14. (previously presented) The machine according to claim 13 wherein the computer includes document handling software, and wherein the computer is operative to carry out the at least one banking transaction responsive to the document handling software processing the at least one mark up language document.

15. (previously presented) The automated banking machine according to claim 13 wherein the transaction function device includes a note dispenser, and wherein the at least one banking transaction includes dispensing at least one note from the note dispenser.

16. (previously presented) A method comprising the steps of:

- a) providing an automated banking machine including at least one transaction function device, wherein the automated banking machine is in operative connection with at least one computer;
- b) processing at least one mark up language document with the computer;
- c) carrying out at least a portion of a banking transaction with the transaction function device responsive to processing the at least one mark up language document with the computer in step (b).

17. (previously presented) The method according to claim 16 wherein the transaction function device includes a note dispenser, and wherein in step (c) the portion of the banking transaction includes dispensing at least one note with the note dispenser.

18. (previously presented) The method according to claim 16 wherein the transaction function device includes at least one reader device, and wherein in step (c) the portion of the transaction includes reading indicia with the reading device.

19. (previously presented) The method according to claim 18 wherein the reading device includes a card reader, and wherein in step (c) indicia is read from a card.

20. (previously presented) The method according to claim 16 wherein the transaction function device includes at least one key, and wherein in step (c) the portion of the banking transaction includes sensing an input through the at least one key.

21. (previously presented) The method according to claim 16 wherein the transaction function device includes a depository, and wherein in step (c) the portion of the banking transaction includes receiving a deposit with the depository.

22. (previously presented) The method according to claim 16 wherein in step (a) the banking machine includes at least one output device, and further comprising the step of:

- d) providing at least one output through the output device responsive to processing at least one mark up language document with the computer.

23. (previously presented) The method according to claim 22 wherein the computer includes browser software, and wherein in step (d) the at least one output is provided responsive to the browser software processing the at least one mark up language document.

24. (previously presented) The method according to claim 23 wherein the output device includes a screen and wherein in step (d) the at least one output includes a visual output through the screen.

25. (previously presented) The method according to claim 16 wherein in step (b) at least one HTML document is processed by the computer.

26. (previously presented) The method according to claim 16 wherein the automated banking machine includes an output device, and wherein in step (c) processing the at least one mark up language document is operative to cause the computer to provide an output through the output device and to carry out at least the portion of the banking transaction.

27. (previously presented) The method according to claim 16 wherein the computer is operative to cause the carrying out of the portion of the banking transaction responsive to at least one software applet.

28. (previously presented) The apparatus according to claim 14 wherein the document handling software includes a browser, wherein the computer is adapted to automatically operate at least one transaction function device responsive to the processing of at least one mark up language document with the document handling software.

29. (previously presented) The apparatus according to claim 28 wherein at least one transaction function device includes a currency sheet dispenser, and wherein the banking transaction includes dispensing at least one currency sheet from the currency sheet dispenser.

30. (previously presented) The apparatus according to claim 13 and further including a display device having a display screen, wherein the computer includes document handling software, wherein the computer is operative to automatically display at least one visual output through the display device responsive to processing at least one mark up language document with the computer.
